FOR IMMEDIATE RELEASE

optical control receives SMT China Vision Award for component storage at NEPCON China

April 2019 — [optical control GmbH & Co. KG](http://www.optical-control.com) is pleased to announce that it was awarded a 2019 SMT China Vision Award in the category of Component Storage for its OC-SCAN@CCX.3 component counter. The award was presented to the company during an April 24, 2019 ceremony at the Shanghai World Expo Exhibition & Convention Center during NEPCON China.

The CCX X-ray from optical control is a true plug-and-play system that can X-ray ANY size reel in the same cycle time no matter type of component, or how full or empty it is. High speed combined with the best accuracy, it is capable of providing an ROI faster than any other machine. The highlight of the CCX is – there are no libraries required or need for customer input to get started. It's as simple as plugging in the machine, and start counting.

Additionally, the CCX can be configured for complete automation, including integrations into other systems such as automated storage units. Whether this is done by software only, using a loading and unloading unit, or complete integration, is up to the customer in their steps toward industry 4.0.

SMT China magazine launched the SMT China Vision Awards in 2007 to recognize both international and domestic providers of SMT equipment, materials, software and services that have made outstanding contributions to the rapid growth of China's electronics manufacturing industry by their inventions and innovations.
